INSTALLING TELEVISION

Installation Precautions

1. Use only a power source from a CSA Certified / UL Approved Class 2 Power Supply suitable for use in a Health Care Facility. This TV will operate on either DC or AC voltage, range 18 to 32 volts.
2. Arm Recoil Hazard: The safety brake pin must remain in the SAFETY BRAKE PIN HOLE whenever the television is removed from the arm or when the arm is removed from the wall bracket to prevent the arm from springing open.

Coax Cable Specifications

When using a central power supply, cable selection is crucial. Due to long coax cable runs encountered in hospital installations, coax cable employing a solid copper center conductor and copper shield is required. Cable run lengths MUST NOT exceed 150 feet. Required coaxial cable numbers include Alpha 9804C (non-plenum), Belden 9248 (non-Plenum), West Penn 806 (non-Plenum), or West Penn 25806 (Plenum), which have been tested with coax-powered TVs.

Arm Mounting

This television is designed to attach to a wall mounted suspension arm adjusted to support a television weighing seven pounds. The single coaxial cable on top of the TV is used to supply low voltage AC or DC power (28VAC or 24VDC) and the RF signal to the television.

Note: Contact PDi for additional information on arm compatibility and cable requirements.

Firmware

The firmware for the model PDI-P14W is field upgradeable, but normally does not require this process and should be performed by the hospital technician. A special data file is required from the PDI factory to complete this process. The file is posted on PDI Communication's web site: <http://www.pdiarm.com>. Firmware files are written to the root directory of a blank USB Flash Drive, connected to the TV's Cloning port and updated using the TV's menus. Once complete, the TV settings must be reprogrammed.
